

Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering)

By Sunggyu Lee, Y.T. Shah

Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering) By Sunggyu Lee, Y.T. Shah

The newest addition to the *Green Chemistry and Chemical Engineering* series from CRC Press, **Biofuels and Bioenergy: Processes and Technologies** provides a succinct but in-depth introduction to methods of development and use of biofuels and bioenergy. The book illustrates their great appeal as tools for solving the economic and environmental challenges associated with achieving energy sustainability and independence through the use of clean, renewable alternative energy. Taking a process engineering approach rooted in the fuel and petrochemical fields, this book masterfully integrates coverage of current conventional processes and emerging techniques.

Topics covered include:

- Characterization and analysis of biofuels
- Process economics
- Chemistry of process conversion
- Process engineering and design and associated environmental technologies
- Energy balances and efficiencies
- Reactor designs and process configurations
- Energy materials and process equipment
- Integration with other conventional fossil fuel processes
- Byproduct utilization
- Governmental regulations and policies and global trends

After an overview of the subject, the book discusses crop oils, biodiesel, and algae fuels. It examines ethanol from corn and from lignocelluloses and then explores fast pyrolysis and gasification of biomass. Discussing the future of biofuel production, it also describes the conversion of waste to biofuels, bioproducts, and bioenergy and concludes with a discussion of mixed feedstock. Written for readers with college-level backgrounds in chemistry, biology, physics, and engineering, this reference explores the science and technology involved in developing biofuels and bioenergy. It addresses the application of these and other disciplines, covering key issues of special interest to fuel process engineers, fuel scientists, and energy technologists, among others.

Editorial Review

Review

"This book fulfills a long needed review of bio-mass conversion to supply the needs of the energy and fuels sector of our society. The current state of the conversion of bio-mass to energy and fuels is covered in a comprehensive way. Requirements for future process developments to ensure economic viability are clearly stated."

?David G. Retzioff, Department of Chemical Engineering, University of Missouri, Columbia, USA

"... a valuable addition to the bioenergy literature. It outlines the essentials in biofuels and bioenergy processing with authority and clarity. It is an excellent read!" ?Khaled A.M. Gasem, School of Chemical Engineering, Oklahoma State University, Stillwater, USA

About the Author

Sunggyu Lee is Russ Ohio Research Scholar in Coal Syngas Utilization and Professor of Chemical and Biomolecular Engineering at Ohio University, where he is also the Director of the Sustainable Energy and Advanced Materials (SEAM) Laboratory. Dr. Lee holds 32 U.S. patents and has authored over 450 journal articles and conference papers. He has authored and edited 15 books in the fields of chemical, energy, and materials processing. His research specialty areas include alternative fuels, syngas conversion, supercritical fluid technology, chemical process engineering and reactor design, and polymer synthesis and processing.

Dr. Y.T. Shah received his bachelor degree in Chemical Engineering at University of Michigan and Master and Sc.D degrees in Chemical Engineering at M.I.T. During more than 40 years of academic career, he has served as department head of Chemical Engineering, Dean of Engineering and Provost in more than five different institutions. Currently he is a professor of engineering at Norfolk State University, Virginia, USA. Dr. Shah's research interests are in chemical reaction and reactor engineering, particularly as applied to energy and environmental topics. He is an author of three books, about 50 refereed chapters or review articles, and more than 200 refereed journal publications. He has been a consultant to numerous industrial and governmental organizations, particularly in the area of synthetic fuels.

Users Review

From reader reviews:

Richard Martinez:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to find out everything in the world. Each reserve has different aim as well as goal; it means that guide has different type. Some people experience enjoy to spend their a chance to read a book. They may be reading whatever they have because their hobby is definitely reading a book. Think about the person who don't like reading through a book? Sometime, individual feel need book when they found difficult problem or perhaps exercise. Well, probably you'll have this Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering).

Penny Risley:

Have you spare time to get a day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity to get spend your time. Any person spent their own spare time to take a wander, shopping, or went to often the Mall. How about open as well as read a book allowed Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering)? Maybe it is to be best activity for you. You realize beside you can spend your time with the favorite's book, you can better than before. Do you agree with its opinion or you have different opinion?

Alexander Ray:

Book is definitely written, printed, or illustrated for everything. You can recognize everything you want by a publication. Book has a different type. To be sure that book is important matter to bring us around the world. Adjacent to that you can your reading talent was fluently. A e-book Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering) will make you to possibly be smarter. You can feel more confidence if you can know about anything. But some of you think in which open or reading the book make you bored. It is far from make you fun. Why they may be thought like that? Have you looking for best book or ideal book with you?

Kevin Vickers:

What is your hobby? Have you heard in which question when you got college students? We believe that that problem was given by teacher for their students. Many kinds of hobby, All people has different hobby. So you know that little person like reading or as looking at become their hobby. You need to understand that reading is very important in addition to book as to be the matter. Book is important thing to increase you knowledge, except your teacher or lecturer. You discover good news or update about something by book. Numerous books that can you take to be your object. One of them is Biofuels and Bioenergy: Processes and Technologies (Green Chemistry and Chemical Engineering).
