Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science)

By Ramesh Bhandari

Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science) By Ramesh Bhandari

Survivable Networks: Algorithms for Diverse Routing provides algorithms for diverse routing to enhance the survivability of a network. It considers the common mesh-type network and describes in detail the construction of physically disjoint paths algorithms for diverse routing. The algorithms are developed in a systematic manner, starting with shortest path algorithms appropriate for disjoint paths construction. Key features of the algorithms are optimality and simplicity. Although the algorithms have been developed for survivability of communication networks, they are in a generic form, and thus applicable in other scientific and technical disciplines to problems that can be modeled as a network.

A notable highlight of this book is the consideration of real-life telecommunication networks in detail. Such networks are described not only by nodes and links, but also by the actual physical elements, called span nodes and spans. The sharing of spans (the actual physical links) by the network (logical) links complicates the network, requiring new algorithms. This book is the first one to provide algorithms for such networks.

Survivable Networks: Algorithms for Diverse Routing is a comprehensive work on physically disjoint paths algorithms. It is an invaluable resource and reference for practicing network designers and planners, researchers, professionals, instructors, students, and others working in computer networking, telecommunications, and related fields.

Editorial Review

Users Review

From reader reviews:

Milton Jones:

Information is provisions for anyone to get better life, information today can get by anyone with everywhere. The information can be a understanding or any news even a huge concern. What people must be consider while those information which is in the former life are challenging to be find than now could be taking seriously which one is acceptable to believe or which one often the resource are convinced. If you get the unstable resource then you understand it as your main information it will have huge disadvantage for you. All of those possibilities will not happen throughout you if you take Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science) as the daily resource information.

Donald Sams:

The book Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science) has a lot of knowledge on it. So when you read this book you can get a lot of profit. The book was compiled by the very famous author. Mcdougal makes some research ahead of write this book. This book very easy to read you can get the point easily after reading this article book.

Claudia Fox:

As we know that book is vital thing to add our know-how for everything. By a guide we can know everything we would like. A book is a group of written, printed, illustrated or blank sheet. Every year seemed to be exactly added. This guide Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science) was filled concerning science. Spend your time to add your knowledge about your scientific research competence. Some people has several feel when they reading a new book. If you know how big advantage of a book, you can experience enjoy to read a guide. In the modern era like today, many ways to get book which you wanted.

Anita Burns:

Reading a guide make you to get more knowledge from it. You can take knowledge and information from your book. Book is prepared or printed or outlined from each source that filled update of news. In this modern era like now, many ways to get information are available for anyone. From media social similar to newspaper, magazines, science publication, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Are you ready to spend your spare time to spread out your book? Or just

searching for the Survivable Networks: Algorithms for Diverse Routing (The Springer International Series in Engineering and Computer Science) when you necessary it?
